Weems & Plath's
Endurance Collection:
State-of-the-Art
Marine Instruments

Imagine purchasing an instrument for your boat that will never tarnish!! For the first time ever, a solution has been found to the problem every boater has when the harsh marine environment eats away at an instrument's finish. Weems & Plath has diligently worked to resolve this problem using new technology to offer permanent solutions.

Weems & Plath's revolutionary Endurance Instrument Collection now includes more than 30 styles. You can mix and match three sizes, three colors and multiple styles to fit any requirements on your boat.

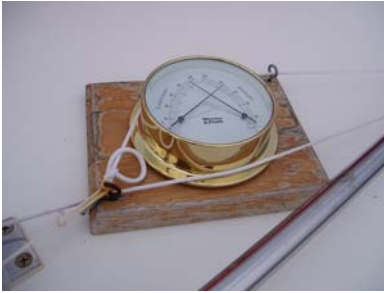

What makes Endurance unique is that each instrument is completely maintenance free and weatherproof. The instruments can be mounted indoors or outdoors and will always look like new!

They never need polishing or refinishing. Weems & Plath is so sure about the long lasting durability of this finish, that they offer a lifetime warranty on not just the movement inside but also on the finish of the instrument. The brass case of each instrument is coated with an ultra-hard mirror finish that stands up to tough outdoor conditions.

Also, its unique mounting system allows for easy removal and replacement, and one mounting plate is interchangeable with any of the instrument sizes.

True to its name, this new product was recently put to the test aboard the Weems & Plath vessel, Bee Weems. Mounted horizontally to the roof of the down east cruiser and facing the heavens for the 3,000 mile journey from the Chesapeake, down the Intracoastal Waterway to the Bahamas and back to the Chesapeake, the Endurance brass

comfortmeter was subjected to all kinds of weather and sea conditions and endured. Upon inspection under a microscope after removal, no imperfections were found. The finish was pristine and free from any effects of the harsh marine environment. In contrast, the wood plaque the instrument was mounted on was cracked, peeling and discolored.

In addition to the durable finish, another feature that makes the **Endurance Collection** the best choice for use in the marine environment is the fact that it is weatherproof. The beveled glass crystal creates an elegant look of quality and style, while a silicone o-ring seated behind the crystal protects the front of the instrument from water and contaminants.

The next exciting feature that is also offered for the first time is a unique mounting system developed by Weems & Plath called the **Weems Slide ‘n Lock Mounting System**. This simple to use system locks instruments in place, yet allows easy removal for adjustments, battery changes, storage or security. The instrument can be lifted off its mounting plate without having to remove the screws that secure it to the wall or bulkhead of the boat. A unique dovetail design on the backside of the instrument slides over the mounting plate and locks into place so that no mounting screws are in view.

Finally, **Endurance** is available in three sizes so that the appropriate size can be selected to fit in any space configuration

on a boat or wall. They can also be mixed and matched. Endurance instruments include – a quartz clock, a barometer, a comfortmeter (measures temperature and humidity), a time & tide clock and clinometer. The largest size is available in a radio control clock, a day clock and a combined barometer with comfortmeter.

There is a Lifetime Warranty on both the finish and the movement of every instrument!

Available in three stunning finishes: Brass, Chrome and Black Pearl, the **Weems & Plath Endurance Collection** is the solution to every boater’s desire for a beautifully styled, easy to use, and maintenance free instrument for the boat, home, or office.

Endurance Series Dimensions:

85: Dimensions – dial 85mm diameter, base 105mm, depth 38mm
Weight: 295g \$110.00USD

#125: Dimensions – dial 125mm diameter, base 152mm, depth 41mm
Weight: 589g \$130.00-\$145.00USD

#145: Dimensions – dial 145mm diameter, base 181mm, depth 48mm
Weight: 658g \$155.00USD
